

525T Flax Packing

Description:

Style 525T is braided from our proprietary blend of high quality flax and ramie yarns. Once braided it is throughly impregnated with PTFE and our proprietary break in lubricant.

To attain proper impregnation we twist, dip, dry, braid and dip again. This prevents 525T from washing out like most flax, ramie or hemp packings. The result is a longer lasting packing which makes it possible to extend the time between re-packs.

- Temperature: To 250 F (120 C).
- pH: 4-9 Speed: 1500 FPM
- Pressure: To 200 PSI (15 bar)
- Construction: Square Braid

525T is a superior grade marine service packing. Excellent for any water based service.
